

Social Media Performance Analysis

Insights & Recommendations — a data-driven review of 450 posts across four platforms

Executive Summary

Over the past year, **450 posts** across Instagram, TikTok, Twitter/X and Facebook generated **13.2M impressions**, reached **9.5M unique users** and drove **870K engagements** — adding **10,000 followers** at a total spend of **\$117,573**. Headline numbers are solid, but the sharper story is that **a small number of platforms, content types and campaign strategies are responsible for most of that performance**. The rest is background noise.

Three patterns hold across the entire dataset:

- **TikTok leads on engagement rate** — and it isn't particularly close
- **Video outperforms every other format**
- **Afternoon posting beats every other time slot**

None of these are marginal differences — they are significant gaps that should directly shape how time and budget are allocated going forward.

What the Data Shows

1. TikTok leads — and it's not particularly close

Platform	Posts	Engagement Rate
TikTok	124	8.97%
Instagram	129	6.26%
Twitter/X	118	3.86%
Facebook	79	3.46%

TikTok generates **2.5× the engagement of Facebook and Twitter/X** — at meaningful scale (124 posts is a real sample, not a handful of outliers). The overall account rate is **6.61%**, matching the global benchmark exactly: in line, but not beating it yet.

Implication: *TikTok is first priority for content investment and budget; Instagram second. Maintain Facebook and Twitter/X, but don't resource them heavily until returns justify it.*

2. Video is the format that moves people

Video averaged a **9.35%** engagement rate — the highest of any format. Carousel: 6.10%. Images: 4.88%. Text: 2.62%. The advantage holds across platforms: **14.03% on TikTok**, 5.75% on Instagram. Every top viral post is a TikTok video or an Instagram carousel.

Implication: *Shift to a video-first content calendar; carousels support product storytelling; images and text play a supporting role.*

3. Campaigns are not created equal

Campaign	Engagements	Eng. Rate	Note
Summer Vibes	269,120	8.08%	\$0.10 CPE — most efficient
Spring Launch	—	—	2,833 followers gained
Back to School	50,982	5.18%	Well below average

Summer Vibes was the most efficient campaign of the year; **Spring Launch** drove the most follower growth. Both winners shared one profile: seasonal relevance, video-forward content, a single clear visual identity. One

honest flag: impressions and reach are down from July peaks (-37.2% and -41.3%) — seasonal, but worth watching heading into Q4.

Implication: build future campaigns on the Summer Vibes model — seasonal hook, video content, single visual identity. A proven template; use it.

4. When you post matters more than we've been treating it

Afternoon	Evening	Morning	Midday
7.47%	7.15%	5.69%	5.53%

A ~2-percentage-point gap between the best and worst posting windows — on the same content. Default to afternoon publishing; it's a low-effort, no-cost lift.

5. Boosting works — but only if you're selective

Boosted posts averaged **38,217 reach / 3,542 engagements** per post vs. **13,930 / 1,247** organic — a **2.7×** lift for only \$0.14 vs. \$0.12 CPE. But boosting a weak post amplifies mediocrity: three viral posts hit 10,000+ engagements with no boost at all.

Implication: publish first, boost selectively — 24–48h organic, then fund what's already gaining traction.

6. One number to watch

Follower conversion sits at **0.11%** — 10,031 followers from 870K engagements. The engagement quality score of **1,547,421** confirms interactions are substantive, not passive. Stronger profile-level CTAs and follow-rewarding content (exclusive previews, series, behind-the-scenes) should move this number.

Recommendations

- 1. Invest more in TikTok.** Scale content volume and production quality on the platform already outperforming everything else.
- 2. Make video the default.** Reorient the content calendar around video-first storytelling; carousels and images in a supporting role.
- 3. Replicate the Summer Vibes blueprint.** Seasonal theme, strong visuals, video format. Build Q2 campaigns around it.
- 4. Lock in afternoon publishing.** Standardise the posting schedule. Zero cost; the data is clear.
- 5. Boost based on performance, not plan.** Shift from pre-scheduled boosting to a promote-what's-working model.
- 6. Set a follower conversion target.** Lift the 0.11% conversion rate over the next two quarters; track it as a KPI alongside engagement rate.

Final Thought

The brand performs in line with industry benchmarks — 6.61% average engagement (matching the global average), 9.5M reach, \$0.13 CPE. But the data points consistently in one direction: **a small number of decisions — platform, format, timing — account for most of the performance.**

The opportunity isn't to do more. It's to do more of what already works.
